PROFESSIONAL SUMMARY

Second-year B.Tech student in Internet of Things (IoT) at VNRVJIET with a strong academic record (SGPA 9.48/10) and a keen interest in software development, AI, and problem solving. Currently building solid foundations in Java, C++, and Data Structures, and applying them through hands-on IoT and embedded-systems projects. Regularly participates in hackathons and coding challenges, including reaching the final round of the SyntheVision Hackathon. Seeking software development and technical internship opportunities to build practical technology solutions and grow as a programmer.

EDUCATION

B.Tech — Internet of Things (IoT), 2nd Year **SGPA: 9.48 / 10**

VNR Vignana Jyothi Institute of Engineering & Technology (VNRVJIET)

Academic focus: programming fundamentals (C, C++, Java), data structures, and IoT / embedded-systems coursework, with consistent top-tier academic performance.

TECHNICAL SKILLS

Programming Languages: C, C++, Java — actively strengthened through coursework and regular problem-solving practice

Web Technologies: HTML, CSS, JavaScript — fundamentals for building and styling web pages

Core Skills: Data Structures, Problem Solving — applied through coding platforms (LeetCode, CodeChef) and hackathons

Interests: Software Development, Artificial Intelligence, Internet of Things

PROJECTS

Underground Soil Moisture Detection System

- Developed an IoT-based system for monitoring underground soil moisture levels.
- Designed to enable efficient, continuous monitoring of soil conditions.

NodeMCU Wi-Fi Controlled Smart Car

- Built a smart car controlled wirelessly over Wi-Fi using NodeMCU.
- Enabled remote control of the car's movement through a connected system.

ACHIEVEMENTS & ACTIVITIES

- **SyntheVision Hackathon — Finalist:** Reached the final round, gaining experience in building and presenting a technical solution under time constraints.
- **College Hackathons:** Participated in college-level hackathons and technical problem-solving activities, developing teamwork and rapid problem-solving skills.
- **Competitive Programming:** Maintains active profiles on LeetCode and CodeChef to practice data structures and algorithmic problem solving.
